## Module 5 - Instructions on playing "Jeopardy"

1. The participants are organized into six groups with an equal number of members.
2. The groups are named after social protection guarantees, namely "Health", "Children", "Working age", "Elderly", "Maternity", and "HIV".
3. There are four rounds, each corresponding to a question.
4. The group chooses a number from the board (slide 4 of the presentation) and has to answer the question of that number.
5. The group consults among themselves and selects the correct answer, within a time limit of 45 seconds.
6. The group gets ten points for every correct answer and loses five points for every incorrect answer.
7. There are two 'Jackpot' questions where the groups have the chance of earning an extra ten points for every correct answer. Hence, for a correct answer, the group earns 20 points. For a wrong answer, they still lose five points.
8. There is a 'Joker' question, wherein the group gets ten points without answering a question.
9. The points earned by each group are converted into budget money according to the conversion table on the following page.
10. This money is recorded in the budget table.
11. The budget money is used by groups to design social protection provisions for their respective guarantees.

Duration: 1.5 hours

Conversion table

Jeopardy points	Budget money (billion dines)	Jeopardy points	Budget money (billion dines)
-20	0	25	288
-15	32	30	320
-10	64	35	352
-5	96	40	384
0	128	45	416
5	160	50	448
10	192	55	480
15	224	60	512
20	256
