## Module 10 - Instructions on converting social protection recommendations into scenarios

1. Participants work in the same groups as for "Jeopardy".
2. Each group is given a blank sheet of paper and refers to their assessment matrix.
3. The group selects the recommendations they would like to prioritize.
4. These are translated into scenarios by defining practical design parameters (e.g. target group, benefit level).
5. For the purpose of this activity, the group designs a maximum of three scenarios.
6. One recommendation may be converted into more than one scenario. Not all recommendations have to be converted into scenarios.

Duration: 45 minutes
